PROFILE

Indicators 650 L used to limit overheating in industrial processes.

In the event of alarm, the instrument latches the fault conditions until reset by the operator. Reset can be run by the operator from the front key (red R), from the digital input (optional) or serial line (optional).

As an additional feature, the instrument counts the number of times the alarm limit is exceeded and total amount of time the alarm is active.

This information can help to evaluate furnace deterioration and plan maintenance work.

The displays show the process values, plus multilingual scrolling messages for diagnostics and alarms.

Configuration and unit operation is done with the front keys.

The keys have dual-function LEDs indicating pressing of the keys. The LEDs provide feedback for pressed key and also provide guidance for permitted operations.

Initial commissioning is simplified by guided configuration text prompts that cover the commonly used base parameters accompanied by in line help messages.

With GF_eXpress software and PC, you can program the extended configuration, create recipes and update the firmware without having to apply power to the instrument.

Thanks to the Smart Configurator function, you obtain the required configuration by answering a few simple questions.

The initial parameters can always be reset, both from the keypad and from the GF_eXpress software.

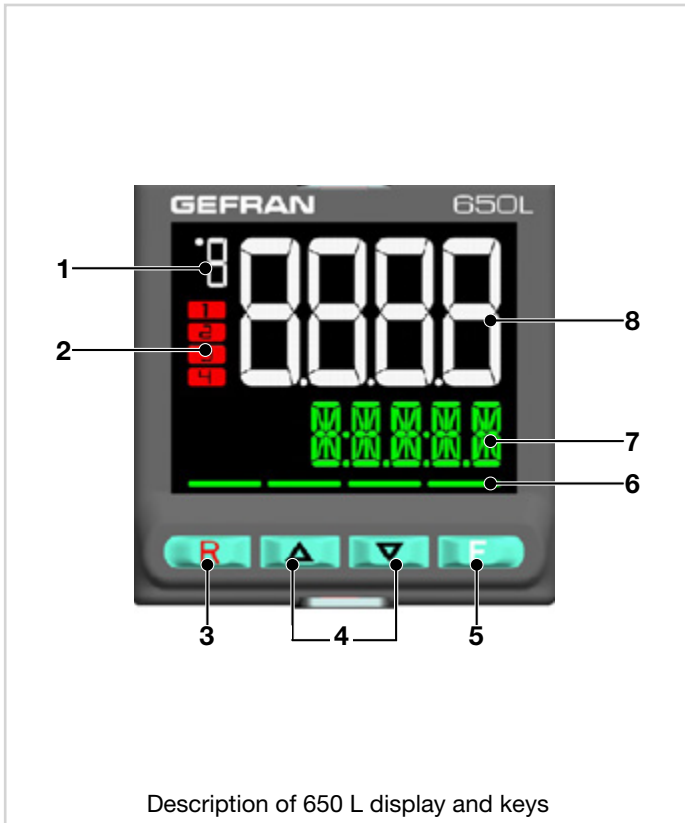

The devices offer complete diagnostics (broken or incorrect connection of sensor), operation count, settable alarm limits (useful for scheduling preventive maintenance).

A trigger meter and alarm memory reset timer are available for alarm 1.

Maintenance of the system in which the device is installed is made easier by the ability to replace the instrument at any time

simply by removing it from the faceplate. No additional steps are needed.

DISPLAY AND KEYS

1. Temperature unit of measurement
2. ALARM status
3. Alarm reset key
4. Up/down keys: raise/lower the value of the parameter displayed on the SV or PV display.
5. F key: lets you navigate among menus and parameters. Confirms the parameter value and selects the next parameter.
6. Key pressed signals.
7. SV display: Alarm 1 limit, description of parameters, diagnostic and alarm messages. It can be used to view the alarm limit and displays the associated message in the event of alarm.
8. PV display: process variable, parameter values.
